

## Information for Reviewers of Technical Comments and Responses

**SCIENCE'S MISSION:** *Science* seeks to publish those papers that are most influential in their fields and that will significantly advance scientific understanding. Selected papers should present novel and broadly important data, syntheses, or concepts. They should merit the recognition by the scientific community and general public provided by publication in *Science*, beyond that provided by specialty journals.

### CRITERIA FOR JUDGMENT

**Technical Comments and Responses** discuss research published in *Science* in the past 6 months. They should focus on analyzing the data or interpretations in the published paper and are not intended for publication of new research results meriting a full paper elsewhere. They are published online with abstracts in print.

**Overall Recommendation:** If possible, please provide separate reviews for each Comment and Response. Technical Responses are not shared with the comment author prior to publication or rejection. Only those referee comments pertinent to the Comment or Response will be forwarded to the respective authors.

On the basis of the mission statement above, recommend in your review whether the comment and reply should be published in *Science* and provide a more detailed critique based on the following:

**Technical Rigor:** Evaluate whether, or to what extent, the data and arguments address or clarify substantially a fundamental point of the original paper or provide an enlightening discussion worthy of bringing to the attention of our broader readership.

**Novelty:** Indicate in your review if the conclusions are novel or are too similar to material already published, including in discussions on the internet.

**Length.** Technical Comments and Responses should be of roughly equal length and no more than 1000 words each. Both comment and reply may include up to 2 figures/tables.

**Supporting Online Material.** Supporting online material includes methods, text or data that is of interest only to the specialist, but that is still necessary for the integrity and excellence of the paper. It must be directly related to the conclusions of the print paper. We welcome suggestions for deletions of supporting online material or items that should be moved to supporting online material.

**Security:** We ask reviewers to inform us if they have concerns that release of this paper may pose a danger to public health, safety, or security. Such concerns will be brought to the attention of the Editor-in-Chief for further evaluation.

*The final selection is based on relative quality of papers rather than absolute merit and is constrained by available space in Science and our commitment to balance subject matter.*

**Conflict of Interest:** If you cannot judge this paper impartially, please notify us immediately. If you have any financial or professional affiliations that may be perceived as a conflict of interest in reviewing the manuscript, please describe those in your confidential comments.

**Confidentiality:** We expect reviewers to protect the confidentiality of the manuscript and ensure that it is not disseminated or exploited. Please destroy your copy of the manuscript when you are done. Only discuss the paper with a colleague with permission from the editor. We do not disclose the identity of our reviewers.

**Returning your review:** Please return your reviews using our WWW form at <http://www.submit2science.org/mtsreferee>. Use the user name and password sent to you by the editor to login to the site. We recommend that you type your reviews in a separate word processor and paste it into the review form; any typing on the form will be lost after the 90-minute session times out. We can also receive reviews by email to [science\\_reviews@aaas.org](mailto:science_reviews@aaas.org) or by FAX to 202-408-1256.
